

Preclinical Project Manager

ETAP-Lab (54)

Permanent contract

ETAP-Lab is looking for a **Preclinical Project Manager** for its laboratory in Normandy, France. This thriving independent company specialises in the preclinical study of the efficacy and safety of products from the pharmaceutical and food industries. ETAP-Lab, currently celebrating 30 years of existence, continues to grow and is laying foundations for the future by investing in the field of neuroscience.

You will join a young team within a CRO that is well-respected in the field of stroke, working for an international clientele. Working autonomously, you will be responsible for managing rodent studies - from planning, through to statistics and technical implementation - while supervising a team of research assistants. The technical and scientific solutions you offer will allow our customers to achieve their goals.

Job Description

Reporting to the person in charge of the laboratory, you will be responsible for:

- Managing pre-clinical rodent studies in the field of stroke, including planning, implementation, data collection, statistical data analysis and report writing, and presentation.
- Ensuring compliance with study protocols and monitoring by making sure that studies are carried out in complete compliance with study protocol, ISO 9001: 2015 version certification, and the regulations in force governing animal experimentation.
- Ensuring that the study is carried out on time and within the predefined budgets.
- Discussing with clients the technical information necessary to carrying out the studies and presenting the study results.
- Conducting harmonious exchanges of information with the project's academic partner.
- Participating in the technical implementation of the studies.
- Supervising research assistants.
- Managing bio-analytical activities relating to the preclinical studies.
- Contributing to the quality control of all deliverables received by external parties.
- Participating in maintenance of the company quality system.
- Discussing your own activity with your line manager, on a regular basis.

Requirements

- You hold a Master's or PhD degree in neuroscience - ideally in the field of stroke.
- You already have several years' experience in preclinical development in neurosciences, within either the pharmaceutical industry or a CRO.
- You have several years' experience of practice in rodent surgery (other than stereotaxic).
- You are both knowledgeable about, and experienced in, carrying out immuno-histological studies.

- You have an excellent command of MS Office tools such as Excel.
- You have a sound knowledge of statistical analysis.
- You have a good command of written and spoken English.
- You are autonomous, well-organised, and meticulous - and your mindset is both objective and critical.
- You hold a Level 1 diploma in animal experimentation, and are also qualified in neuroscience-oriented surgery.

Place of work

The Caen region (Normandy, France)

Contract type

Permanent full-time job role (35-hour week)

Salary

Negotiable, depending on experience

Desirable experience

Preclinical development within a pharmaceutical industry or CRO: 3 to 5 years
